COLD WEATHER FUSION WEBINAR SUMMARY

Cold weather fusion operations will be covered in great detail. What to do, what not to do and how to solve for fusions ops when the weather is not cooperating. This discussion will also cover normal weather best practices and rainy weather procedures. Make sure your preferred contractor and inspectors sign up for this one.

New for 2024: Tech Video Notes run before the show starts and address topics of interest unrelated to the day's content.

Pre Show Tech Note: Side Bend Testing

Side Bend testing is the most common and least expensive way to destructively test a butt fusion joint. Given 90% of joints are butt fusion, this is a great way to ensure the contractor is following the rules. This webinar's pre show deck (meaning we run it 5 minutes before the show starts) will be devoted to Side Bend Testing.

Advanced Registration Required.
