WEBINAR SUMMARY

The tenth webinar is being held on Sept 10th at 2 PM Eastern. This webinar has a fancy name, but believe us when we say this is a 'brass tacks webinar.' The primary focus of this 75 minute session is to address the key differences between HDPE design and legacy (DIP/PVC) design. Dan Landy, Alan Ambler PE and a guest will cover restraint, MJ adapters, megalugs, pressure testing, EF, concrete, trenchless pros and cons, laydown areas, trenches, trench widths and plenty of other issues. These are all areas that have unique differences from what you are used to. Grab the new engineer on your team and join us for this important HDPE session. This webinar is graciously sponsored by Robert Alvarado at Modern Polymers. Thank you Robert! Sign up at www.pepipe.org.

Advanced Registration Required.
