WEBINAR SUMMARY

The Alliance engineering team receives regular inquiries on how the engineer can make sure HDPE pipe goes into the ground in the manner intended. The Alliance will discuss the three pronged approach which embodies best practices in processes, training and verification. The Alliance has taught this method for the last two years with good result. Engineers and owners who listen in to this webinar will come away with a better understanding of these processes and recommendations which should result in better designed and better installed HDPE jobs.

Advanced Registration Required.
