WEBINAR SUMMARY

This classic HDPE oriented session focuses upon the 8 primary methods of installation of HDPE pipe. The most common method is open trench so it will get the most time, but the other 7 will be shared as well. Ever wonder how pipe bursting can work so effectively? Ever thought HDD was non sensical? Covered topics include: compression fit, marine, plow in above grade, and the more common methods open cut, pipe bursting, HDD and sliplining. The HDPE experts will cast a light on the common and niche methods that make HDPE what it is today. This session will appeal to both the novice and the expert, but it is geared to the pipeline designer with little HDPE experience. CEU/PDH offered, just stay until the end and respond to the question.

Moderator: Peter Dyke, Alliance for PE Pipe

Speakers: Jon Schumchyk, Haugland Group, Todd Grafenauer, Murphy Pipelines, Ryan Ruiz, ISCO Industries

Advanced Registration Required.
